

THE HISTORY OF FOUR SURVEYS CONFIRMING DEMAND FOR RESIDENTIAL AGED CARE BEDS IN MALLACOOTA (2004-2018) Linda Bruce and John Hilvert (CHIRF) (29 April 2018)

The Hilvert Advisory conclusion of the huge demand and lack of supply of aged care residential beds in Mallacoota, confirms three other studies conducted between 2004 and 2016 and numerous ones conducted by the MIVA-MIVA Project and MIAC from 1985-2003.

In 2004 Mallacoota Inlet Aged Care (MIAC), (formerly MIVA-MIVA Aged Care Inc), with Doug Sewell as President, submitted an application for Federal funds for a stand-alone hostel of 15 beds.

This grant application failed. In 2005 Minister Peter McGauran was asked by local resident, Wilma Becker why the grant application was rejected. Minister Peter McGauran suggested that MIAC work with MDHSS on the need for a hostel.¹

This resulted in the MIAC 2005 survey: On McGauran's advice MIAC commissioned a survey of all MIAC members and the wider Mallacoota community to identify the need for an Aged Care facility.

184 people responded that there was an "urgent need" for such a facility and that ideally it would cover high care and dementia, low care, and respite. A further document seeking authority to present these survey sheets to any necessary body was requested, and 142 were returned. Its analysis indicated that by 2015, Mallacoota would need a 30-bed hostel. (This was confirmed to be accurate in 2015)

As required, the CEO of MDHSS Ms. Celia Wallace, validated the MIAC survey as a true representation of the individuals involved. The findings were reported to Minister Peter McGauran in the hope that authorities would grant funds for a residential aged care facility in Mallacoota.²

The Boyd Feasibility Study: In 2006 MIAC were encouraged by a change in Federal government policy for more funding of Aged Care Residential facilities in rural and remote areas.³

However, because they could not depend on government funding, MIAC employed Dennis Boyd Consultants to produce a feasibility study on costs to build and operate a retirement village, including Nursing beds, without government funding.⁴

The Boyd feasibility study offered five options:

- Fund raising for a stand-alone hostel;
- A retirement village with no government funding;
- Twinning with an established Nursing Home group such as BUPA;
- Overnight care beds manned by nurses, as Cann River currently had, (referred to as the Cann River model); or
- Partner with a local organization (such as MDHSS).

Fund raising and overnight care beds manned by nurses, based on Cann River model, (three houses to supply residential Nursing beds to the aged) were favoured.⁵ So MIAC moved its aim from establishing a low care hostel for the aged, to establishing residential nursing home beds.

The Dench, McLean and Carlson Feasibility Study:

In 2013, MIAC commissioned Dench McClean and Carlson⁶ to do yet another study into Residential Aged Care in Mallacoota. Its report found the community overwhelmingly in support of the proposal

to establish residential Aged care in Mallacoota. The survey had 210 replies, this being a 30% response rate, which is much higher than the usual survey response of 5-10%.

Highlights from the survey found "more than 90% support the need" and "...more than 80% believe that the existing services were not adequate for the Mallacoota community." (P 12)

In April 2018, the *Mallacoota and Surround: Regional Aged Care Demand and Supply Analysis*, by Hilvert Advisory, commissioned by CHIRF, concluded that as recorded by the Census 2016, the Mallacoota region has a population of 1493, (2016 Census) and although 321 people in this area are over 70 years old, Mallacoota has **nil** residential aged care beds. It is 25 residential beds short considering the government guideline of 78 residential aged beds per 1000 people aged over 70 yrs. Hilvert calls it an "anomaly".

In Mallacoota township, 23.6 % of the Mallacoota township population are aged over 70 yrs as compared to the average for Victoria being 14 %. Almost ¼ of Mallacoota residents, (one in four people), are aged over 70 yrs.

Having Nursing Home Beds in Mallacoota would not only benefit Mallacoota as a whole, but would help alleviate the bed shortages in both the Bega district and Orbost district, so it would be a win for everyone concerned.

Given the huge gap in Aged Care Residential Beds in Mallacoota and the dire need, the next question is how can we achieve this?

¹ MIAC Minutes President Doug Sewell's report 29th Sept 2005

² MIAC minutes dated 28th Sept 2006

³ MIAC minutes 7 Sept 2006

Mallacoota is 1 hour 50 mins drive from Orbost, Vic, and one hour 10 minutes drive from Eden, NSW. Melbourne is 526km away, and Sydney is 567 km. This is one reason Funding bodies have forgotten it.
